

# PENDO AMANI

Full-Stack JavaScript Developer | Frontend Engineer | Python & Node.js Specialist

pendoamani05@gmail.com | +254 710 269 931 | Nairobi, Kenya (Remote: PST/EST/GMT/CET) | github.com/pendoamani

## PROFESSIONAL PROFILE

Results-driven Full-Stack Developer with 4+ years shipping production code, automating technical workflows, and building scalable applications in fast-paced remote startup environments. Deep expertise across the JavaScript ecosystem — React, Vue.js, Node.js, TypeScript, NestJS — with a strong Computer Science foundation in data structures, algorithms, and systems design. Proven track record of end-to-end feature delivery, CI/CD pipeline management, and cross-functional engineering collaboration. Active open-source contributor, hackathon participant, and competitive programmer with a passion for clean code and continuous technical growth.

## TECHNICAL SKILLS

**Languages:** JavaScript (ES6+), TypeScript, Python, HTML5, CSS3  
**Frameworks:** React, Vue.js, Angular, NestJS, Node.js, Firebase  
**Core Skills:** REST APIs, DOM API, Responsive Design, Git, GitHub, CI/CD, VS Code, Jira

## PROFESSIONAL EXPERIENCE

### Software Developer & Technical Operations Lead

June 2021 – Present

MarketForce — Nairobi, Kenya (Remote)

- › **Full-Stack Feature Development:** Designed, built, and maintained production-grade operational workflows and technical processes serving 10,000+ active users. Developed responsive UI components with JavaScript/HTML5/CSS3, integrated RESTful APIs, and implemented data-driven feature refinements based on user analytics in a fast-paced startup environment.
- › **Frontend Engineering:** Architected interactive web interfaces and reusable component libraries using vanilla JavaScript and modern ES6+ patterns. Implemented DOM manipulation, event-driven architectures, and responsive layouts — delivering consistent cross-browser experiences that improved user engagement metrics.
- › **Backend Integration & API Development:** Collaborated with senior engineers to design and consume RESTful APIs, manage data flows between frontend interfaces and Node.js/Firebase backend services. Debugged and resolved 15+ production integration and performance issues through systematic root-cause analysis.
- › **CI/CD & DevOps:** Owned testing and validation of CI/CD pipeline deployments, ensuring zero-downtime releases. Maintained Git/GitHub version control with feature-branch workflows, conducted code reviews, and enforced branching strategies across a distributed remote engineering team.
- › **Technical Documentation & QA:** Authored comprehensive API documentation, technical SOPs, and developer onboarding guides. Conducted thorough QA testing of deployments to ensure all operational processes met quality standards before production rollout.

### Full-Stack Developer Intern & Community Lead

2021

Mama Ngina University — Technology Department — Kiambu, Kenya

- › **Full-Stack Inventory System:** Led a cross-functional team of 4 developers to architect and build a complete inventory management system from scratch. Implemented the full stack — frontend (HTML, CSS, JavaScript), backend logic, and database operations — achieving a 30% improvement in query performance through query optimization and indexing.
- › **Developer Community Leadership:** Organised and hosted monthly technology workshops for 50+ participants, covering JavaScript fundamentals, Git workflows, and modern web development practices. Coordinated logistics, prepared coding exercises, and mentored junior developers.
- › **Open-Source & Version Control:** Managed open-source contribution workflows on GitHub including issue triage, pull request reviews, documentation updates, and collaborative code reviews — maintaining organized, production-ready codebases with structured commit histories.

## PROJECTS & TECHNICAL CONTRIBUTIONS

### Inventory Management System [JavaScript, HTML, CSS, SQL]

End-to-end full-stack application built from scratch with a team of 4. Features included real-time stock tracking, automated low-stock alerts, role-based access control, and performance-optimized database queries that reduced load times by 30%. Led frontend architecture and database design decisions.

### Nonprofit Web Platform & Digital Tools [HTML, CSS, JavaScript, Firebase]

Volunteer project building and maintaining responsive web presences and interactive digital tools for local Nairobi nonprofits. Translated community requirements into functional, accessible web solutions with mobile-first responsive design and Firebase backend integration for content management.

### Open-Source Contributions & Hackathon Projects [JavaScript, React, Git, GitHub]

Active contributor to open-source JavaScript projects on GitHub — submitting bug fixes, improving documentation, and participating in code reviews. Regular participant in online hackathons and tech communities, building rapid prototypes with React and modern JavaScript. Strong competitive programming background enhancing debugging efficiency and algorithmic problem-solving.

## EDUCATION & CERTIFICATIONS

### BSc Computer Science

Mama Ngina University — Kiambu, Kenya

2021 | Data Structures • Algorithms • Software Engineering • Databases • Web Development

### Certifications

- › **Full Stack Software Development** — Mama Ngina Univ., 2021
- › **Project Management Essentials** — Asana Academy, 2024
- › **AI Tools for Productivity** — LinkedIn Learning, 2024
- › **Microsoft Office Specialist** — Microsoft, 2024
- › **HubSpot Operations Hub** — HubSpot Academy, 2023
